Regular Session of Town Council Held Last Monday Evening

Several Apply For Advantages
Of Consolidation Act

Town Council met in regular session last Monday evening with Mayor Cox in the chair and councillors Brydie, Newham, Broughton and Sangster present.

After the reading of the minutes J. Oskar waited on Council and asked that the town bylaw re garage licenses be explained to him. He was of the opinion that the license was imposed for the protection of the garage owners, yet the town allowed others to handle everything the garages handled and they did not have to pay any license. This being the case he thought the license fee of \$25.00 for garages was too much. The matter was left to solicitor F. Baird to interpret the bylaw be- fore anything definite was done by council.

T. Fitzhenry waited on council regarding securing a suitable wagon for scavenger work. On motion of councillors Broughton and Newham Mr. Fitzhenry was instructed to get old wagon repaired.

On motion of councillors Brydie and Broughton the secretary was instructed to write the Dept. of Municipal Affairs, giving particulars regarding indeg- nities whose property is up for sale under the Tax Recovery Act.

W. E. Osborne was present to interview council re tax on his property, known as the old shoe factory. Council decided that the assessment as arranged at a previous meeting should stand.

The school board wrote asking for \$200. This was granted. The town auditors submitted their report for the past quarter, showing that the books were in good order and town's affairs in a satisfactory condition.

A letter from the Department of Relief advised council that in future the town's share of relief would be 41 per cent. instead of 33 1/3 as in the past.

Several more applications to take advantage of the Tax Consolidation Act were received and were approved, on motion of councillors Brydie and Newham.

The usual accounts as passed by the finance committee were approved for payment.

Sofball Girls Play Almost Errorless Game

Safeways Wins From Redcliff
By 3-4 Score

One of the best girl softball games of the season was played in Medicine Hat last Thursday when Safeways and Redcliff met in their final league game of the season. Safeways won out by the narrow margin of a run to 3 and the game was in doubt till the last ball was pitched. Both teams put up an almost errorless game and kept the fans on their toes from start to finish.

We understand that home and home games are now being arranged between the two teams with which to close the season. So far the ladies have not been definitely set but it is expected they will be played next week.

Mr. and Mrs. Manary and family have taken up residence in the house recently vacated by Mrs. V. Tremblh.

Mrs. V. Tremblh and Velma Joanne accompanied by Mr. Tremblh's mother, Mrs. C. V. Smith, of Trail B.C., who has been here for the past few months, left on Tuesday by motor for Trail.

Redcliff Reminiscences

Taken From The Review File of
August 20th, 1915

Of all the boys who left Redcliff for the front so far, B. J. Stinson is the only one who has escaped death or wounds. Of the 126 who left Medicine Hat only 18 are left.

The Canadian Wheatland Co. has 10,000 acres of weeds, so according to Inspector A. C. Gill, it would cost \$5,000 to cut the crop but the penalty for not cutting is \$50. It will, therefore be much cheaper for the company to pay the fine.

Most farmers in this district are expecting oats to go 60 bushels to the acre.

The wheat crop of western Canada is estimated at 246 million bushels.

Mr. A. W. Woodcock has a fine 60 acre crop of flax just west of town. It will go 20 bushels to the acre.

Additional Locals

Miss Nellie Morrison of Medicine Hat, was the guest of Mr. W. Thacker over the weekend.

Some splendid musk melons from town, are on sale in town this week.

Mr. and Mrs. Barr and Shirley are leaving this weekend for holiday at Vancouver and other western points.

Mrs. Sellhorn, who has been on a motor trip to Cranbrook with Mr. and Mrs. Ellis of Medicine Hat, returns home today.

Miss Broadfoot, who has been attending Summer School at Edmonton, returned home on Friday last.

Mrs. Broadfoot, who has been holidaying at the Coast for the past two weeks, returned home on Monday.

Mr. George Thomson left on Tuesday for two week holiday at Vancouver, Victoria and Seattle.

Miss Jeanne Harrington will leave on Sunday for her home near Winnipeg to recuperate after her recent illness.

Miss Murray, Superintendent of Medicine Hat Hospital, was the guest of Mrs. R. S. Hodge yesterday.

Mrs. Colard of Saskatoon, stopped off here on Monday on her way home from Banff and was the guest of Mr. and Mrs. A. N. Colard.

The Alberta Greenhouses, here have been leased by a firm of Chinamen from Medicine Hat. They are now planting the tomato crop for the Christmas trade.

Messrs. Raymond and Byron Junderson, who are large stock holders in the Gundersen Brick & Coal plant here, arrived in town last week end from their home in Minneapolis. They were accompanied by Mrs. B. Gundersen and daughter and an aunt, Mrs. Anderson. Gunderson brothers spent two days here inspecting the plant and expressed themselves as well pleased with conditions and the business being done. The party left by auto for a visit to Banff and Lake Louise before returning home.

Mrs. O. Vogstad, leaves Saturday for a holiday at the coast.

Mr. and Mrs. Leslie Vernon are spending a two weeks holiday in Vancouver and Victoria.

Mrs. Cecil T. Hall left Wednesday morning on the excursion for a three weeks vacation in Vancouver.

Mr. Warwick Weeks is leaving Saturday for a vacation at Waterton Lakes and points in British Columbia.

Miss Pauline Morrish of Calgary, arrived in town on Monday to spend a short holiday with Mrs. Hicks.

Mr. and Mrs. W. Swanson have moved from Lockwood to Henry VanWert's residence on First St.

A quiet wedding took place in St. Barnabas Church, Medicine Hat, on Friday, July 27th, when Mr. James Dacre, son of Mr. and Mrs. J. N. Dacre of this town was united in wedlock to Miss Joan Winnifred Briery, of Medicine Hat, eldest daughter of Mr. Wilson, of Regina.

Beauties, Stars, Hit Tunes in "Murder at Vanities"

Providing an entertaining combination of mystery and music, Paramount's production of Earl Carroll's "Murder at the Vanities" comes to the Monarch Theatre Monday.

Earl Carroll's beauties, who were brought from the New York show to appear in the filmation of his Broadway revue, are everything they are, supposed to be—beautiful and beautifully on display. The dance ensemble, particularly the climatic "Jazzing the Classics" number, are spectacular in the extreme, and what is most unusual—are strictly stage choruses. Nothing done in the picture couldn't be duplicated on any stage.

The story deals with the opening night of a "Vanities" production. A strange woman mysteriously murdered, and a short time after one of the principals drops dead on the stage. The entire action takes place backstage, and the story covers just a three hour period.

In the cast are Jack Oakie, Victor McLaglen and Gertrude Michael, who are well known to screen fans, and who perform in customary effective style.

Tennis Tournament Here Next Weekend

Will Be Open To All Tennis
Players In Town

Members of the Town Tennis Club are putting on a tournament here which will start next weekend. The tournament is open to all tennis players in town who wish to enter. A full list of Singles and Doubles events for both ladies and gentlemen will be arranged.

The entrance fee will be 25 cents each. All entries should be made with Dan Jensen before Wednesday next, the 22nd after which the schedule will be drawn up.

The games will be played on the town court between the hotel and the Hicks store and the court is being put into excellent condition for the tournament.

All interested are urged to get their entries in as soon as possible.

Mr. and Mrs. Luna and family left on Tuesday for a week's vacation at Standard, Calgary and Banff.

Child Actress in Important Picture

Youngest of all the members of the cast of Paramount's picture-ization of Damon Runyon's "Little Miss Marker," now at the Monarch Theatre, is tiny five-year-old Shirley Temple who plays the title role.

This little girl who is featured with such seasoned players as Adolphe Menjou, Dorothy Dell, Charles Bickford and Lynne Overman, has been a motion picture actress for slightly over a year. From a small beginning in the Baby Burlesque Comedies, Shirley was rapidly advanced to feature parts in several comedies.

Shirley plays the role of the child who is left with the bookmaker as collateral on a racing O. U. When her father fails to reclaim her Shirley is adopted by the bookmaker, Adolphe Menjou, and soon grows to be part of the strange world behind the scenes of Broadway. Although the adorable child first adopts the slang and the manners of the "mugs" and the "molls" she soon wins them over to her way.

"Little Miss Marker" is listed among the Best Pictures of the Year.

The Bush Fire at Elkwater Lake is Now Under Control

100 Men Kept on The Grounds
To Guard Park Property

The bush fire which was raging over the Elkwater Lake district last week end and for a time threatened to wipe out this popular summer resort, is now under complete control. The absence of wind, cool evenings and occasional showers favored the fighters to get the fire well in hand by Monday.

At one time over 600 men were assembled on the ground fighting the flames and campers and farmers' wives were kept busy supplying them with food and drink.

On Monday most of the workers were released and only about 100 kept on the ground to be in readiness should any fresh outbreak occur.

One noticeable feature of this fire was the utter lack of any kind of equipment with which to fight the fire. With the present unemployment situation this would be a good time for the provincial government to under-stand some plan whereby provision could be made for getting water from the lake and surrounding streams, piped to advantageous points throughout the park.

Mrs. McLachlan and Mrs. J. Kitchen, accompanied by the latter's grandson, John Edward Kitchen are leaving Friday for a holiday trip to B.C. While away they will visit Mrs. McLachlan's daughters, Mrs. Rand of Sunderland and Mrs. Raincock at Penicton.

JUST FOR FUN

Everybody is ignorant, only in different subjects—W. Rogers

We sometimes get the truth, even in an affidavit—Hughes.

A historical novel is like a puzzle, for it is a fictitious tale based on a stern reality—Pres Yale University.

There are no illegitimate children, only illegitimate parents—O. O. McIntyre.

Never lend books to one ever returns them. The only books I have in my library are those people have lent me—Anatole France.

Farm Indebtedness

Survey Shows Indebtedness Has Generally Increased in Recent Years

Farm economic research in Saskatchewan has been in progress since 1929 under the direction of Dr. Wm. Allen of the University of Saskatchewan. Since 1929, studies of the individual farm businesses have provided considerable information on farm indebtedness. From 1930 to 1933 inclusive, records were obtained from 1,323 farms situated in representative districts of Saskatchewan. In 1930, in the northwest district, the farming district around Tuttleford was studied, and on the heavy land of the west-central portion of the prairie plains, the district of Kindersley was selected. Indebtedness per acre of crop land for these two areas was found to be \$11.32 and \$10.59 respectively. Similar figures for districts studied in 1931 were as follows: Davidson, \$10.68; Maple Creek, \$3.96; and Richmond, \$3.53. For 1932, the figures were Rosemont, \$14.42; Scott, \$24.39; Edgemoor, \$13.92; and Brimley, \$7.07. The 1933 study revealed that indebtedness per acre was \$19.11 in the Creston and Volcan districts; \$37.01 at Balcarres and Indian Head, and \$16.36 in the Neudorf and Lemberg districts. The indebtedness of recent years have prevented farmers meeting their obligations, and despite reduced costs of operation and curtailed living expenditures has generally increased.—The Economic Analyst.

Keep Navy Plan Secret

British Workmen On Construction Are Sworn To Silence

A mysterious admiralty plan is being carried out at Milford Haven, England. Seventy men, all sworn to silence, are at work. They have fenced off sixty acres of land and have begun preparations for large-scale tunneling operations. It is known that, a mile away, the admiralty proposes to establish a \$175,000 coaling depot, but the Milford Haven scheme has given rise to three theories. These suggest that the secret works will prove to be:

1. An arsenal—a branch of Woolwich.
2. A new naval base.
3. An air base, to be linked up with the flying boat station at Pembroke Dock.

But these seventy workmen know they are working for the silent service—and they are saying nothing.

Seeking Giant Panda

Lizard In Bronx Zoo May Soon Have Playmate

"The giant lizard that has been eating a dozen eggs at a meal at the Bronx zoo in New York may, before long, have a panda for a playmate. Lawrence K. Griswold is expected to lead another expedition in September in search of the giant panda, one of the most spectacular animals in existence. Griswold brought three of the lizard giants this spring from the Dutch East Indies, but this panda quest will take him to Tibet. No zoo has ever exhibited a giant panda alive and it is believed the only one in America are three mounted in Philadelphia.

In shape, the animal is like a bear. Dr. Raymond Ditmars, the curator, said, "It has strange black and white markings and a white face with two black rings around the eyes. These give it the appearance of wearing spectacles. Little is known of its habits.

Finds Interesting Book

While searching through some unclaimed effects in his hotel at Port Erie, Ontario, Robert Beatty, well-known border sportsman, found a 200-year-old book titled "Athena Parvosa's Poems" written in old English style with spelling peculiar to those times. Published in Edinburgh, Scotland, in 1729, by Thomas Ruddiman, it contains an extensive glossary of Highland Gaelic words and their English equivalent.

Crested wheat grass is being tested in Eastern Canada as a turf grass, but preliminary experiments have not been promising. It seems to be particularly adapted to the drier sections of the Western plains area, just as blue grass is highly adapted to Ontario and Quebec, and bent grass to the Maritime provinces.

It is reported that Russia has over a thousand scientists working on problems of crop improvement.

Face powder was used by Greek women 2,500 years ago.

Reichswehr Looms as Power After Nazi Purgings

General von Seeckt

Out of the chaos and darkness following the Nazi "purgings" ordered by Chancellor Adolf Hitler, looms the Reichswehr, whose 100,000 gray uniformed goose-stepping soldiers have become the real power of the Reich, pushing aside the storm trooper legions to hold the future destiny of the nation. Monarchist, and Republican, and loyal to their ex-chief, President Paul Hindenburg, the Reichswehr is composed of privateers enlisted for 12 years, and officers for 25 years. Led by General von Seeckt, fiery, unemotional Junker, the Reichswehr has become the most efficient, and powerful professional army Germany has known for many a day, despite its complete lack of heavy arms, tanks, aeroplanes, etc. General Hindenburg is the present chief, holding the portfolio of Minister of War in Hitler's Cabinet.

Treating Ivy Poisoning

Remedies Suggested To Alleviate Burning And Itching

A few people are immune from the effects of poison ivy, but most sufferers know to their sorrow that poisoning by this mean plant is no joke. Many remedies are suggested to alleviate the burning and irritation, the simplest being the immediate washing of the parts affected with good strong yellow laundry soap. An application of alcohol cotton saturated with a solution of common baking soda is simple and efficacious; also douching with a three per cent. solution of potassium permanganate is widely recommended. Iodine tincture has also been found to be useful. Once the blisters have appeared, all rubbing should be avoided and care taken to localize infection by painting iodine around the edges of the sores. However, in cases of severe poisoning, the aid of a physician should be obtained. On return from a day's outing where there was danger of meeting poison ivy, the liberal use of the strong yellow soap might prevent much suffering. Indeed, it is a good plan for campers and other holiday makers to carry a piece of this soap with them. As a protection when going among ivy, says the Dominion Botanist, it is well to wash all exposed skin surfaces with a five per cent. solution of ferric chloride in water, allowing it to remain on. This course of action will prevent any measure intended to neutralize the poison ivy. If oil is suspected to have reached the unprotected skin, scrubbing with laundry soap under running water is recommended to remove it before it penetrates. Dousing dry baking powder or boracic acid on oozing sores should be avoided, as they appear to seal the sores over with a hard crust, thus aggravating conditions. Frequent exposure of the sores to air gives relief.

Safety Gasoline Tank

Winnipeg Man Has Invention That Will Prevent Gasoline Spillage

A small wire cylinder attached to a gasoline container that will prevent an explosion when the gasoline catches fire was demonstrated by Henry Horn, young inventor of Winnipeg. The attachment consists of a coil of fine wire mesh placed inside the container.

A soft solder plug acts as an emergency valve on the same principle as that employed in a fire sprinkler system.

The attachment can be installed on and size containers and fitted to any type of vehicle. Aviators, members of the local fire commission and officials of the military district were interested spectators at tests.

The U.S. patent office in Washington, D.C., estimates that the two-million patent will be registered by 1936. The first invention was numbered in 1936.

Russia is conducting experiments with agribusiness with a view to making them a major food product for the masses.

Just Another Animal

Dogs Are Usually Annoyance To Everyone But Owner

The pious devotion a great many people feel toward dogs should not be allowed to obscure the fact that a dog may cause untold damage and inconvenience to a great many people and hence all owners of dogs should give heed to the plea of the police to keep them under control so that they do not make nuisances of themselves.

The police say they have received a large number of complaints that dogs are destroying gardens, barking, chasing people and otherwise conducting themselves in a manner that gives offense to a great many persons. They are appealing to dog owners to take upon themselves the responsibility of seeing that their pets do not become a nuisance to the community.

To its owner a dog may be a friend and companion of the noblest virtues, but to the neighbors it may be just another animal that digs up the flower beds, tracks up the front porch and barks half the night. The owner owes it to the rest of the population who may not share his fondness for his pet to see to it that their rights are not invaded.—Saginaw Daily News.

Important As Food

Next To Milk Eggs Are Considered Most Valuable

If we had to do without milk, the next most valuable single food would be eggs. Eggs are more nearly interchangeable with milk in nutritive value than any other food, according to scientists whose life-work is the study of foods.

Eggs are so very important, says the Bureau of Home Economics of the United States Department of Agriculture, that that country would be better off if everybody could be sure of at least three or four eggs a week, and more if possible.

FANCFUL FABLES

Daydreaming

Reason Not Quite Clear

Why Ortol Builds Nest On Swinging Branch Of Elm

Editors are called upon to answer all sorts of questions. Here is a sample. A reader notes that an oriole has hung its nest on the extremity of an elm branch drooping high over one of the city's reservoirs. He notes that the oriole always seems to prefer elm, and he asks why this bird prefers the flexible wind-blown elm rather than the more rigid oak or oak?

We submitted the question to a bird expert, and here is his reply:

"When a fisherman wants a lot that will hold almost double and yet have strength to hold the strongest trout he selects the most pliable one he can find. When you consider the weight of that oriole's nest, when laden with its precious cargo, just imagine what would happen if it were suspended from a rigid ash twig—it would surely snap off in the first strong wind; but securely tied to the drooping elm twig—whose fibres are as tough as a stout linen—the cradling sways and swings gently with each movement of the breeze, and the stoutest gale never seems to weaken it." Maybe there is something in this argument. And maybe not.

Speaking as a mere observer we would say the reason is to prevent squirrels from robbing the nest. Squirrels are inveterate nest robbers.

On a rigid ash or oak branch it would be easy for a squirrel to rob the nest.

But even a squirrel would never venture to the utmost extremity of a thin, swaying elm branch.

Now which explanation is correct—if either?—Montreal Herald.

Trees And Moisture

Million Leaves Discharge Ten Of Water On Hot Day

An average elm oak or elm tree each season approximately 5,000,000 leaves according to scientists. Packed together, these leaves would cover five acres, and they are continually giving off moisture—perspiring, you might say.

On a fairly hot dry day, for every one million leaves about a ton of water will be given off. Therefore, you can see what need trees have of water. Water, air and a few minerals that are in the ground—while minerals the tree imbibes, thirty times in its water—what else would build a great tree.

And here is a thing to remember, for it is essential in knowing how to prune a tree: The roots of almost all trees extend as widely and as deeply as the branches and leaves; they have a certain amount of leaves and branches you must have a corresponding amount of roots to nourish them.

Heat Retards Mining Operations

Necessary To Install Refrigeration 8,000 Feet Underground

Refrigeration nearly 8,000 feet underground in the famous Rand gold-mining district in South Africa, setting up a "cold gold" technique for a large increase in the world supply of the yellow metal, was announced by the Carrier Corporation.

In the Rand district, producing at nearly half the world supply, heat has begun to limit the depths at which gold can be mined. Below the hot barrier are vast gold deposits—enough perhaps to be of potential effect on the world's economic condition.

An air-conditioning plant to drive 400,000 cubic feet of cold air a minute to the bottom of the Robinson deep mine near Johannesburg, is under construction.

Lamb chops are delicious if dipped in lemon juice just before broiling.

If you add four to your blueberry pie, shake in a little salt with the flour. It will improve the flavor.

Make it a rule to rub all corners of the kitchen stove and gas stove with kerosene, with paper. If rubbed off then there is no difficulty in cleaning the stove afterward.

When cooking eggs, wet the shells thoroughly in cold water before placing them in the hot water and they will not crack.

To remove ink stains on linen, lay the stained part flat in milk. When the milk is discolored change to fresh milk. Wash next in cold water and ammonia. Use milk if you have no ammonia.

Sweet One—"I was so cold last night at the theatre."

Bright Young Fellow—"Maybe it was because we were sitting in 'Z' row."

Halloween has been traced back nearly 2,000 years to the time of the Druids.

Lodol Hobbegum was one of the foremost Dutch marine painters.

Ornamental Hedges

Best Time For Trimming Depends On Variety Of Plant

Isabella Preston, Central Experimental Farm, Ottawa, says hedges are made of different kinds of plants, some of which are deciduous, that is, they drop their leaves every fall, while others are evergreen.

At the Central Experimental Farm, Ottawa, about one hundred and thirty different varieties of trees and shrubs have been tried and there are now about sixty different hedges growing side by side some of which were planted in 1889.

The deciduous hedges are generally trimmed about the end of June or when the season growth is almost completed. This gives them time to make enough new growth to cover the wounds left by the clipping. The evergreen hedges are trimmed a little later as their growth is slower.

Sometimes a few odd branches may grow large and spoil the neat appearance of the hedge after the trimming. If this occurs the branches are cut off.

The trimming should be done annually as it is difficult, if not impossible, to remake a hedge which has been shorn. It is better to clip the hedge at the wrong season rather than not clip it at all.

The shaping of a hedge is very important and it has been found that at the Central Experimental Farm that it is better to have it widest at the base and widest at the top or it can be rounded or flat. In districts where there is much snow, a tapered top is much the best, as the snow will slide off after settling into the hedge and spreading and breaking the branches and thereby spoiling the shape. If the hedge has rounded sides and is no wider above the base, there is danger that the lowest part will grow bare and ugly.

Origin Of Word "Purser"

Formerly Meant Man Who Paid Out Money On Ship

Originally the purser was the dispenser, the man who held the ship's purse and paid out from it. Bourne, the modern continental term for exchange or money-market, is really the same word as purse, and so the purser might have been called the dispenser, just as the man of business of many old colleges is technically the bursar.

On ships the term in time became further specialized, and whereas on modern men-of-war the duties are performed by a commissioned paymaster, the purser is the officer on great passenger liners whose function is largely to look after the travellers and generally perform the duties of the manager of a large hotel.

Keep The Windows Open

Gas Accumulating In Moving Car Might Explain Accidents

Fuel dull while driving? Stop and get a breath of fresh air. Recent tests made prove that most automobiles after being driven for some time, a quantity of carbon monoxide to affect seriously the mental alertness and muscular coordination of the driver. Insurance companies and various authorities are calling attention to the fact that while it is commonly known that many motorists are suffocated by gas from motors running in closed garages, it is not generally known that gas accumulating in moving cars may be the cause of many hitherto unexplained traffic accidents.—Detroit News.

Know What He Meant

The teacher was examining the class to see how much they remembered of a lesson on fresh air. He gave the day before, and then he said: "Well, Tommy, what name do you remember?"

"The warmer," was the unexpected reply.

"Nonsense. There's no such animal. Sit down."

"Tip me over another hand."

"Please, miss. I know what 'e means. 'E means an oter."

Women Aviators In Britain

Forty-seven women fly by their own aeroplanes in Great Britain. This interesting statistic, in the group of private flying among women is contained in the report of Lloyd's register of aircraft, which states the total number of British civil aircraft in use on May 15 was 3,130.

Commercial canoeing is one of the oldest of the larger organized industries in the Dominion. The first factory was established at Grimsby, Ontario, in 1878.

WORLD HAPPENINGS BRIEFLY TOLD

An unusually severe heat wave in France caused the 984-foot Eiffel Tower to stretch eleven inches, toward between sunrise and sunset, engineers said.

The total cost of Great Britain's extended air force for 1934-1935 will be about \$100,000,000. The house of lords was informed by the secretary for air, Lord Londonderry.

France has decided to invite all the nations of the world to take part in a great international exhibition in Paris in 1937. Its estimated cost is \$20,000,000.

The British Columbia canned salmon pack during the year ending June 30, 1934, totalled 1,000,939 cases, the Vancouver Merchants' Exchange reported. In the preceding year the pack totalled 895,256 cases.

Hundreds of acres of sugar beets that failed to germinate because of the drought, have been plowed under by farmers in the Chatham district, according to W. H. Hilde, of the Ontario department of agriculture.

Premier T. D. Pattullo of British Columbia announced that the Mount Graham Park in British Columbia was named "Mount George Graham" in honor of Rt. Hon. George P. Graham.

Establishment of a free wheat market in the Soviet Union has been announced, and will take effect with the delivery of the present harvest. The decision was made in June by the Communist party congress.

Mrs. Irene Parley, U.S.A. member for Alle and minister without portfolio in the provincial cabinet, announced at a U.S.A. constituency convention that she would not stand for nomination again.

Italy has accepted the British government's invitation to engage in conversations prior to the 1935 naval conference, and the Italian delegation will be in London at the end of the summer or the beginning of the fall.

Ramatch Chavala, the first Indian to make a flight from India to England has started on the first stage of his planned flight around the world. He is going first through Baghdad, Aleppo and Istanbul, travelling eastward.

Canada's total exports of paper and manufacturers of paper during June were \$7,277,892. This was lower than in May when the total was \$8,074,867, but considerably greater than June last year when it was \$5,988,610.

A Unique Donation

How Dr. Grenfell Procured Radium For His Work in Labrador

How Sir Wilfred Grenfell once converted pearls into radium is another of that Labrador physician knight's almost inexhaustible anecdotes, and he told this one as he sailed aboard the steamer New Northland for his forty-something year in bleak Labrador.

It was in Pittsburgh. Sir Wilfred recalled, "and the woman there was not only exquisitely gowned but a number of them had long strings of pearls. 'Ladies,' I said, 'if each of you would give me just one string from those strings on which there are so many, I could buy some radium and fight cancer at my hospital.'

Sir Wilfred said it was agreed. He got the pearls, and bought the radium.

Unearth Sea Serpent

Ancient Specimen Is Discovered By Geologists in Alabama

What may be the "body" of a sea serpent, a monstrosity, has been unearthed in exploration of the Alabama geological department. Dr. Walter L. B. Jones, state geologist, disclosed recently.

"We have already taken out 10 feet of a 36-foot monstrosity near West Green, in Greens county, that probably is 70,000,000 years old," Dr. Jones said.

"And in the same county near Eatav, we have unearthed a two-ton turtle, possibly as old. Both were encased in chalk of the cretaceous age."

"Then, there was the plumber's daughter who went to church without her bridal veil."

"Yes, and had to go back for her veil."

The Canadian milling industry provides a market for about 15 million bushels of Canadian grain grown in the manufacture of food products and feeds.

OGDEN'S "Alls well that Smokes Well"

by LOU SKUCE

OGDEN'S

CUT PLUG

Wheat Champion

Elfron Grower in Winner at Saskatoon Exhibition

Frank Isaacson, Elfron, Sask., winner of the world's championship at Chicago in 1933, was made wheat champion at Saskatoon industrial exhibition. The sample of Reward wheat shown by Mr. Isaacson is possibly the same as captured the Chicago honor. H. J. Davies of Edsall, a nearby district, was second and Kalmann Isackel, Lestak, provincial champion, was third in the Reward class.

In Marquis, C. H. Conn, Aberdeen, had first place with K. Conn of the same district second.

H. G. Newfield, Codette, who talks of a 40-bushel crop on his farm in the far northwest this year, was the leader in oats, and E. Thompson, Pellyton, won the Speers trophy for the best peak of barley with his six-row sample. H. A. Myers, Vanasco, led in two-row barley.

By Ruth Rogers

A liquid known by chemists as carbon disulphide is now added, producing a solution called viscose. This solution is allowed to "ripen" for a day or two, after which it is ready for spinning. This is accomplished by forcing the viscose through the holes, into a preparation of dilute sulphuric acid. The acid causes the long, thin jets of liquid to change into threads, which are spun into the material we know as rayon.

This artificial silk is altogether different from the natural product. It lacks the tensile strength of pure silk, but it has a fine appearance, and this combined with its cheapness, led to its being used extensively either alone or as a mixture with wool or cotton.

Noted Talking Bird Dead

Provided Amusement For Many Visitors To St. Louis Zoo

Jocko, famous talking Minn, one of the various Oriental starling-like birds, at the St. Louis zoo, is dead from old age.

Jocko amused zoo visitors for six years. His repertoire included the following phrases:

"Hello you," "Hello-Jocko," "How do you like the zoo?" "Anybody home?" "How, how much money you got?"

Jocko appeared in several talking revues. He will be replaced by another Minn, which was Jocko's understudy.

Laurence de Guzman, a Brazilian priest, was the recipient of the first aviation patent. It was granted to him by the king of Portugal after the priest had made a successful balloon ascension at Lisbon.

Macaroni products are said to have originated in China and Japan; but the Italians, who were using macaroni in the fourteenth century, learned about it from the Germans.

Another nice idea is to carry it out in natural blue and white dotted with pink piglet trim.

Style No. 435 is designed for sizes 8, 10, 12 and 14 years. Blue is required 2 1/2 yards of 39-inch material with 1 yard of 39-inch contrasting and 3/4 yard of 1/2-inch material.

Price of pattern 30 cents in stamps or coin (note is preferred). Wrap coin carefully.

Little Journeys in Science

RAYON

(By Gordon H. Gust, M.A.)

Rayon, or artificial silk, which has become in recent years a widely used product, resembles good paper in that it consists of pure cellulose. Four different processes have been perfected for its manufacture, but of these the viscose process is used for over 80 per cent. of the world's rayon production.

High grade bleached wood pulp (usually taken from spruce trees), is the starting point for the production of artificial silk. Canada supplies almost 40 per cent. of the world's requirement of wood for this purpose.

This material, which consists largely of cellulose, is treated for two hours with a weak solution of caustic soda, which results in the formation of artificial silk. Sulphuric acid is squeezed out of this alkali solution, and the material is then spun in a closed vessel.

A liquid known by chemists as carbon disulphide is now added, producing a solution called viscose. This solution is allowed to "ripen" for a day or two, after which it is ready for spinning.

This is accomplished by forcing the viscose through the holes, into a preparation of dilute sulphuric acid. The acid causes the long, thin jets of liquid to change into threads, which are spun into the material we know as rayon.

This artificial silk is altogether different from the natural product. It lacks the tensile strength of pure silk, but it has a fine appearance, and this combined with its cheapness, led to its being used extensively either alone or as a mixture with wool or cotton.

When Nature Steps In

U.S. Crop Reduction Program Is Not Needed

Nature, stepping in as an unwelcome assistant to the United States government's crop reducing program, has made it overhauled a goal or two.

A survey showed that the figures aimed at in the five major divisions—wheat, cotton, corn, tobacco and hops—either have been virtually reached or surpassed along its course.

It has become apparent to directors of the plan that some surplusage they regarded as ominous a year ago would be needed to avoid shortages this year.

Wheat, the bread grain, averaged \$4,512,200 bushels during 1933-34. The government sought to cut that down to 718,000,370. Now the July report indicates a crop of only 453,821,000 bushels.

The cotton program promises to hit the mark closer. The average in 1933-34 was 14,607,000 bales and the farm administration sought to pull it down to 10,460,251 bales. Official indications to point to 10,185,542.

Recipes For This Week

(By Betty Barclay)

CHEESE CAKE

1/2 cup butter

1/2 cup sugar

5 egg yolks (well beaten)

2 teaspoons lemon juice

1 tablespoon lemon rind

1 pound cottage cheese

1/2 cup cream

5 egg whites

Cream the butter and add the sugar. When thoroughly mixed, add egg yolks, lemon juice and rind.

Beat thoroughly. Put the cottage cheese through a colander or ricer several times until very fine. Add the cream and egg whites. Combine with the first mixture. Fold in beaten egg whites. Press cornflake paper in the bottom of a spring form mold.

Pour in the cake mixture. Sprinkle top with finely grated almonds, sugar and cinnamon. Bake in a moderate oven (350 degrees) until firm, about one hour.

MACEDONIE OF VEGETABLES

2 carrots, cooked and diced

1 cup peas, cooked

1 cup string beans, cooked

2 onions

1/2 cup celery, sliced

2 teaspoons sugar

1 tablespoon butter

1/2 cup meat stock or bouillon

Salt and pepper

Slice the onion. Fry until soft in the butter. Add the other ingredients. Simmer gently until the vegetables are well heated and the stock is absorbed. Other combinations may be used according to what one has on hand.

NEW CANARD WHITE STAR LINER

Making her first arrival at Montreal under the house flag of the new Canard White Star Limited, the S.S. Laurentic, big 19,000-ton liner docked at Montreal, Saturday, July 28, from Glasgow, Belfast and Liverpool.

Her master is Captain R. Seyoum Quinn, and she sailed out again from Montreal on her first departure under the new regime on July 30.

—Canard White Star Photo.

Church steeples are descended from the beeches of the Lower Paleolithic, the ancient idea being to approach heaven as nearly as possible in worship.

An Exavible Record

Swiss Air Liners Operate Twelve Years With No Fatalities

Despite the natural difficulties faced by aviation in Switzerland, a notable record of efficiency has been set in commercial flying in this country.

Since the founding of the first commercial line in 1922, not one fatal accident has occurred on a Swiss line. In fact, no fatal flying accident by mail or freight. During this period a total of over 8,000,000 kilometers (5,000,000 miles) have been flown.

The high standard of aviation in Switzerland is credited to a large extent to the ability of the pilots. In the Swissair, the chief air transport company, each of the pilots has been from eight to fifteen years' flying experience. All pilots employed by this organization must pass through the arduous and rigorous school of military aviation and are especially trained in blind flying and landings in the rough country general to Switzerland. Furthermore, the pilots must be trained in the school of acrobatic flying.

On the express line—Zurich to Vienna—operated by the Swissair, Europe, American airlines are employed. These aeroplanes, because of their performance, have greatly improved the position of Switzerland as a centre of international aeronautical production in Europe. The Swissair is so satisfied with the results obtained that it is planning to use American aeroplanes throughout its entire air fleet.

Strange Ceremony

Hindu Funeral of Indian Princess Attracts Attention in England

Amassed villagers of Tooling, England, through a surrounding series of canals witnessed an exotic funeral ceremony as the body of the Princess Shumshu, Raj, beautiful wife of the Nepalese minister to India, wrapped in winding cloth, was borne on a ghast (funeral) palanquin of fragrant wood, Indian oil and butter, scented \$2,500.

The ashes will be taken to India to be scattered on the sacred Ganges at Benares. Nepal, a feudal kingdom in the foothills of the Himalayas in which white men are barred, is credited with full sovereignty by the British government, which was represented at the funeral for which special permits had been granted to allow it to be held according to the ancient Hindu rites.

Better Value For Money

British Postmaster-General Announces New Stamp Issue

Britain is to have new postage stamps this summer. The first announcement of the change was made by Sir Kingsley Wood, postmaster-general.

The main change will be in the preparation and in the appearance of the new stamps. The actual design and size will not be altered, but colour will be deeper.

"They will be better in appearance and quality than the present stamps—better value for the money," said an official of the post office.

The new stamps will be prepared by the photographic method instead of surface printing.

In order to ascertain the suitability of potato flakes as cattle fodder, researches have been made in Germany where potato flakes have been manufactured for a number of years.

Based on the feeding value of the product, a conclusion has been reached that they may be used with satisfactory results. Mixed with other feeding stuffs, they are said to be suitable for hogs and poultry.

Agricultural Notes

Interesting Hints Gleaned From Many Sources

Cattle can eat poison ivy with impunity but dogs are poisoned by it. For the past seven weeks, the amount of United States wheat in Canada has been shown as two bushels. On July 6 last year, the amount was 3,950,798 bushels.

In tests for feeding dairy cattle at Montana, it was found that the consumption of hay by growing heifers was increased by drawing molasses and sprinkling over the hay.

With the exception of corn and sugar beets which show increases, there is little
